## Gold Update

The gold market has steadily gained upside momentum over the last few weeks. Such movements (*17 since 2000*) invariably ended with two or more overbought signals: an upside Exhaustion Alert, RSI over 75, a completed Sequential 13, or a Combo countdown. None of these are in place. It will take a surge, as observed in mid-April, to signal an upcoming peak.

Opinions in this report are solely those of the author. The information herein was obtained from various sources; however, we do not guarantee its accuracy or completeness. This research report is prepared for general circulation and is circulated for general information only. It does not have regard to the specific investment objectives, financial situation, and the needs regarding the appropriateness of investing in any securities or investment strategies discussed or recommended in this report and should understand that statements regarding prospects may not be realized.

Investors should note that income from such securities, if any, may fluctuate and that each security's price or value may rise or fall. Accordingly, investors may receive back less than originally invested. Past performance is not necessarily a guide to future performance. Neither the information nor any opinion expressed constitutes an offer to buy or sell any securities or options or futures contracts. Foreign currency rates of exchange may adversely affect the value, price or income of any security or related investment mentioned in this report. In addition, investors in securities such as ADRs, whose values are influenced by the currency of the underlying security, effectively assume currency risk. Moreover, from time to time, members of the Charts and Markets team may be long or short positions discussed in our publications.
